

Integration & Test Engineer

DESCRIPTION

The Integration and Test Engineer will develop technical solutions to complex systems integration problems that require the regular use of ingenuity and creativity. Guide the successful completion of systems integration and verification of major spacecraft products.

Required Skills:

- Familiarity with test scripts
- Experience with system verification efforts in either production or development programs.
- Experience writing engineering data (specifications, schematics, plans and procedures).

EXPERIENCE

At least 1-3 + years experience on test and integration of electronics systems. Ability to operate commercial test equipment (eg oscilloscopes, spectrum analyzers, multimeters) either Windows or manual platforms. Experience working with engineering data (specifications, schematics, plans and procedures).

REQUIREMENTS

Bachelor's degree in engineering or physics or equivalent. A Master's degree in engineering, or equivalent is preferred.

U.S. Citizen or permanent residency status required.

We are offer competitive pay, comprehensive benefits and company ownership.
